

AUTOMATIC EASEL BACK MACHINE

Craft has been awarded
the coveted
“Innovation Award”
from the
British Fine Art Trade Guild
for the year 2003.

The “Innovation Award” winning Automatic Easel Back Machine (AEBM), is a manufacturer’s solution to a time-consuming assembly job. This dynamic piece of equipment automates the task of assembling the back, easel (strut) and Craft’s patented Easel Hinge.

The AEBM has a “State of the Art” Programmable Logic Controller (PLC) and a Servomechanism system. By entering size data into the operator interface, the machine will calculate proper hinge position placement. Our fully automatic machine uses a continuous feeding vibratory bowl, easel tower and linear slide, allowing easels, backs and hinges to feed uninterrupted, avoiding costly “down time”. It will accept a variety of back materials and with a production capacity of 1,000 easel backs per hour it is the perfect solution.

Craft’s Automatic Easel Back Machine is part of the next generation of labor saving, cost effective designs for the ever-changing frame industry.
