

# KERF CUT FRAME MACHINE

**T**he Craft Kerf Cut Frame Machine (KCFM) was designed to assist frame manufacturers in utilizing hidden hinges (kerf cut hinges) for their double or multiple frames.

The KCFM simplifies the difficult task of creating the hinge slot (kerf). A precise cut of the correct length and position is made, thus creating a KERF. Once this kerf has been created, the hinge is inserted. Barbs on the hinge grip the frame to ensure a strong application.

The finished product boasts an elegant “*hidden hinge*” look and a sturdy frame attachment.
